

Ken Wall graduated from the University of Saskatchewan with a Bachelor of Science in Agriculture degree (Major in Plant Ecology/Range Management). He began his career with Agriculture and Agri-Food Canada (Swift Current Research and Development Centre) in 1983. The next 33 years were spent researching all things related to salinity. Forages, due to their elevated tolerance to salinity became a significant focus of research over the years. Another focus was conducting salinity tolerance tests of many of the forages and annual crops grown on the Canadian Prairies in AAFC's Salt tolerance Testing Lab working with Dr Harold Steppuhn.

Currently he is working with Federated Co-operatives LTD as a Grow Team Advisor for the South Sask and Southern Alberta Region as well as Forage Specialist for the Prairie Region.

Throughout his career he has operated a small ranch south of Swift Current, Saskatchewan. The majority of the land holdings consist of native prairie.
